What we did:

I took the Classroom Suite program and created some new programs. I took the phonics program and made it a classifying program and I took the state program and made it a program all about me information. These programs were made for a student who scans (child is on a ventilator and can only move thumb).

What it accomplished:

It gave him a sense of accomplishment to be able to answer questions about himself and to do things without help of any other person.
